DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 8, 10-12, 23-24 and 33 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Olsen 5,205,283. Olsen shows a pacing defibrillation system wherein a sensing unit is coupled to some pacing/sensing electrodes (fig 2) and an algorithm is used to determine whether atrial therapy will be applied. As can be seen from the chart on the front cover, ACL and VCL rates in the units of seconds/beat are determined by averaging a block of stored samples (reference numeral 11). If the ratio is 1:1, a normal beat is determined and no therapy is applied (column 8 lines 65-69) and when the ACL exceeds the VCL a determination of flutter/fibrillation leads to atrial therapy (column 9 lines 24). Thus, when the atrial rate as compared to the ventricle rate fails to exceed the factor 1, atrial therapy is inhibited.

Application/Control Number: 09/827,775

✓ Art Unit: 3762

Claims 2-7, 9, 13-22, 25-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Olsen 5,205,283.

Applicant differs from Olsen in specifying that the rate determination is on a beat per minute unit, which is merely the inverse of Olsen's minute per beat which those of ordinary skill in the art are well apprised to do. In addition, as was known, to have varied the number of samples averaged as well as to provide a room for error (thus instead of 1:1 making it 1.05:1) to allow for some variation in calculation would have been obvious since the device may not be 100% perfect in detecting beats due to threshold variations.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark W Bockelman whose telephone number is (703)-308-2112. The examiner can normally be reached on Monday - Friday 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Angela Sykes can be reached on (703) 308-5181. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)-308-0858.
